## Investment Manager Report

In February, Norron Select achieved a return of 0.09 percent. The performance was bolstered by a generally strong stock market, where we witnessed high risk-taking, favoring the most liquid companies. Key positive contributors in the long book included Mowi, which enjoyed a surge in its stock price due to higher salmon prices, banks delivering pleasant earnings surprises, Investor, Atlas Copco, Volvo, Tomra, and Novo Nordisk. As for the short book, Engcon reported earnings that significantly fell short of analysts' expectations, thus positively impacting the fund's performance. On the downside, long book detractors included index protection amidst a buoyant market, SOBI, Medicover, and Renewcell. Autoliv and Munters reported robust quarterly results, making them the weakest holdings in the short book.

February was not only eventful in terms of earnings reports but also busy on the news front. Notably, Renewcell unfortunately filed for bankruptcy after failing to secure its financing. Even though the exposure at the time constituted a very small fraction of the fund, it presents a setback from both a financial and sustainability standpoint. Although the company, to our understanding, has a viable product and the industry as a whole is facing a crucial sustainability transition, Renewcell's challenges in scaling demand to profitable levels were notable.

In terms of fund-specific news, we initiated new positions in Essity, Valmet, and Tomra, opting to sell the latter after the stock surged over 30%. Another change from January is that the fund no longer has any bond exposure. The net exposure remains unchanged at 25%, with a gross exposure of 150%. Regarding the fund's hedging strategies, we currently hold fewer options than usual.

## SDG Allocation 2023 (weighted average fund proportion)

## EU Taxonomy Explanation

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

## Sustainability Data Explanation

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

## About Norron

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages six funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the founders, staff and the Norwegian listed industrial investment company Aker ASA. The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically very competitive return.
