Investment Manager Report	Information		
In March, Norron Sustainable Equity yielded 6.8 percen	Name Norron Sustainah	le Fauity RC SEK Acc	

h, Norron Sustainable Equity yielded 6.8 percent, while (Nordic Small Cap and VINX Benchmark Cap Net Index were up 6.6 percent and 5.6 percent, respectively. Generally, small-cap companies drove the fund in a positive direction, with Envipco, Novo Nordisk, and AstraZeneca also making significant contributions. However, we observed weaker performance in Nibe, ChemoMetec, and Note.

Regarding changes in the fund, we sold our holding in BioGaia due to strong stock performance and a resulting high valuation. However, we will continue to monitor the company due to its strong operational performance. During the month, we also initiated a position in Valmet, considering it a quality company. Despite Valmet operating in a cyclical industry, we assess that the current valuation and expectations are relatively low from a long-term perspective, making the company an overall interesting investment. From a sustainability perspective, Valmet's products enable efficient resource and material usage, contributing to a circular economy.

Regarding the fund's sustainability themes, Healthy & prosperous societies contributed the most with a return of 2.6 percent and an average weight of 34 percent of the fund. In addition to Novo Nordisk and AstraZeneca, Essity also contributed to the theme's positive development. Sustainable cities & infrastructure also drove the fund in a positive direction by 1.9 percent, representing 31 percent of the fund's total weight. Specific contributors were Beijer Ref, Fabege, and NKT, while the performance of NIBE was less satisfactory. Climate & environment, which accounted for only 5 percent of the fund, was the theme that contributed the least (1.2 percent), with Envipco and Tomra as positive drivers.

Norron Sustainable Equity

MONTHLY REPORT

MARCH 2024

About Norron

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages six funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the founders, staff and the Norwegian listed industrial investment company Aker ASA. The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically very competitive return. To read more about the company, we refer to the website www.norron.com.

EU Taxonomy Explanation

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

Sustainability Data Explanation

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

Investment Strategy

Norron Sustainable Equity is an actively managed Nordic sustainability fund, classified as Article 9 under SFDR. Investments aim to combine economic profitability with social and environmental responsibility. The fund invests in large, medium, and small companies. The fund's philosophy is to make sustainable investments. The companies we invest in should therefore contribute to one of the fund's four sustainability objectives: Climate & environment, Healthy & prosperous societites, Innovative & sustainable solutions, or Sustainable cities & infrastructure.

A fund's historical return is no guarantee of future returns. The value of the fund units can both increase and decrease as a result of market developments and it is not certain that you will get back all the invested capital.
