Investment manager report

In August, Norron Sustainable Equity returned +0.60 percent, compared to gains of 1.26 and 1.27 percent for the VINX Nordic and SBX Index, respectively. While the broader indices appeared relatively stable, underlying market movements were considerably more pronounced. Among the 189 constituents of the VINX Nordic Index, performance ranged from +50 to -40 percent during the month, with average volatility of around 8 percent. A clear example was Ørsted, which declined nearly 40 percent – a company to which Norron's funds currently have no exposure.

The fund's top contributor was Novo Nordisk, which advanced more than 15 percent following positive datapresentations relative to peers and a sharp recovery from the summer downturn. During the month, we increased the position from neutral to overweight, making Novo one of the fund's largest holdings. The decision was based on several factors: attractive valuation levels, the market's disproportionate focus on marginal datapoints compared with Eli Lilly, Novo's strong growth profile, and improving sector sentiment. While healthcare has long been pressured by AI-related flows, cyclical rotation, and political rhetoric in the U.S., we now view the sector as offering an attractive re-entry point, with Novo as a cornerstone holding. Additional positive contributions came from Fasadgruppen, Essity, and Getinge.

On the negative side, small-cap exposure detracted from performance, in line with the Carnegie Small Cap Index, with Vestum and Sdiptech notable laggards. We nevertheless expect a recovery as the macro backdrop stabilizes and interest rate cuts are anticipated in the coming quarters. In such an environment, larger capital expenditure decisions should benefit from a calmer inflation outlook and lower rates, which in turn should support the portfolio's small-cap holdings.

From a sustainability theme perspective, Healthy & Prosperous Societies was the strongest contributor (representing 27 percent of the fund), driven primarily by Novo Nordisk. Conversely, Innovative & Sustainable Solutions, with an average portfolio weight of 40 percent, was the weakest theme during the month.

About Norron

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages six funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the founders, staff and the Norwegian listed industrial investment company Aker ASA. The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically very competitive return. To read more about the company, we refer to the website www.norron.com.

EU Taxonomy explanation

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

Sustainability data explanation

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

Investment strategy

Norron Sustainable Equity is an actively managed Nordic sustainability fund, classified as Article 9 under SFDR. Investments aim to combine economic profitability with social and environmental responsibility. The fund invests in large, medium, and small companies. The fund's philosophy is to make sustainable investments. The companies we invest in should therefore contribute to one of the fund's four sustainability objectives: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, or Sustainable cities & infrastructure.

A fund's historical return is no guarantee of future returns. The value of the fund units can both increase and decrease as a result of market developments and it is not certain that you will get back all the invested capital.
