For investors willing to get some attractive yield with daily liquidity and large diversification without embracing the full risks associated with long maturity bonds.

Experienced investment team with expertise in credit selection and fixed income management.

A mix of selected short-dated high yielding bonds and baskets of credit default swaps (CDS indices)

About GAMA

GAMA was founded in 2019 in Geneva to meet the needs of financial intermediaries and other investment professionals. In an increasingly challenging and complex low-yielding environment, GAMA provides best-in-class asset management solutions as well as bespoke investment services tailored to meet clients' expectations. GAMA is regulated by the FINMA.

The Investment Team

GAMA's investment managers are passionate and highly skilled professionals with solid track-records. They have successfully held senior positions in tier-one private banks and asset managers.

Rajeev De Mello

- Previously CIO of Bank of Singapore, Head of Asian Fixed income for Schroders, Western Asset Management and Pictet. Head of Asia and foreign fixed income trading for UBS.
- Specialties: global macro, equities, commodities, emerging local
- MBA from Georgetown University and BSc from London School of Economics.

Manuel Streiff, CFA, FRM

- Previously Head of Fixed Income at Lombard Odier, where he managed unconstrained total return bond funds and mandates.
- Specialties: tactical asset allocation, developed credit, currencies.
- MA from the Graduate Institute of International and Development Studies, Geneva.

- Previously Head of Credit Research at Lombard Odier. Also held senior positions as fixed income trader and portfolio manager.
- Specialties: credit analysis, developed high yield.
- MS in Banking and Finance from HEC Lausanne & MS from HEC Geneva.

Investment Philosophy

We believe

- ✓ ...that investment returns vary according to ever-changing market and economic conditions and require **opportunistic unconstrained strategies**.
- ✓ ...that following a **rigorous team-based investment process** is necessary to formulate strategies that take advantage of the changing investment opportunities.
- ✓ ...that **combining fundamental research and proprietary quantitative models** is essential to stay one step ahead of consensus and deliver consistent, risk-controlled performance.
- ✓ ...that **risk management** is an integral part of the investment process, as it ensures diversification across active strategies, a strict trading discipline and downside protection.

Why invest?

DUAL OBJECTIVE OF DELIVERING 2% RETURNS ABOVE CASH WHILE PRESERVING CAPITAL OVER THE CYCLE

The investment process aims to return 2% above cash, while maintaining a very conservative level of risk through diversification and robust risk management techniques. The portfolio is split between short-dated high yielding bonds and baskets of Credit Default Swaps (CDS) Indices combined with top-rated T-Bills (e.g US T-Bills, German Bubills).

EXPERIENCED TEAM WITH A SOLID TRACK-RECORD

In an increasingly complex world, investment experience matters. GAMA's investment team boasts complementary skills and shares a common investment process and robust quantitative framework to help in decision-making as well as credit selection expertise.

OPPORTUNISTIC AND ACTIVE APPROACH

While most of the bond investments will be kept until maturity ("Buy-and-hold"), the investment team will be able to seize opportunities to get attractive yield.

Combination of Short-dated high yielding bonds and CDS indices

- Fixed and floating bonds with maturities of less than 3 years in both developed and emerging bonds, both Investment grade and high yield, selected to provide a stable source of income and seize credit opportunities (average rating between BBB to BB).
- High quality T-bills to insure a very high degree of liquidity (e.g German Bubills, US T-Bills)
- Sales of Credit Default Swap Indices to get a diversified source of fixed cashflows through credit default risk premiums and a relatively liquid exposure to credit markets in four main segments:
 - I. Europe Investment Grade credit
 - II. Europe Cross Over market
 - III. US High Yield market
 - IV. Emerging Sovereign market

Risk considerations (SRRI) and Glossary

RISK CONSIDERATIONS

Risk and Reward profile: This indicator (SRRI) represents the annualised historical volatility of the Sub-Fund over a 5-year period. The SRRI may change over time and should not be used as an indicator of future risk or returns.

Bond investing: Investments in bonds and other debt securities will change in value based on interest rate moves.

Credit risk: A significant level of investment in debt securities or risky securities implies that the risk of, or actual, default may have a material impact on performance. The likelihood of such a development depends on the creditworthiness of the issuers.

Duration risk: If rates rise, the value of these investments generally drops.

Emerging risk: Investing in "emerging markets" bears greater risk due to social, economic, regulatory, and political instability, making emerging market securities more volatile and less liquid than their developed market peers.

Risks from the use of derivatives: The Sub-Fund may use financial derivatives instruments which will result in the Sub-Fund being leveraged and may result in material fluctuations in the value of the Sub-Fund. Leverage on certain types of transactions including derivatives may impair the Sub-Fund's liquidity, cause it to liquidate positions at unfavourable times or otherwise cause the Sub-Fund not to achieve its intended objective.

GLOSSARY

Duration: Measures the price sensitivity of fixed income securities to interest rate changes.

Credit Default Swaps (CDS): A credit default swap (CDS) is a financial derivative that allows an investor to "swap" or offset his or her credit risk with that of another investor.

Average Life: The length of time the principal of a debt issue is expected to be outstanding.

Volatility: A statistical measure of how a security's price fluctuates. It can also be used to describe fluctuations in a particular market. An elevated volatility is an indication of higher risk.

Shortfall risk: Expected shortfall, also called conditional value at risk (CVaR), provides a conservative estimate of the risk of an investment, by averaging the worst performances for a given level of probability (e.g. 5%).

Yield to maturity: the rate of return an investor will achieve if the investment is held right up to the maturity date.

Government Spread: The difference between the yield on a specific bond and the yield on a government security of comparable maturity.

Credit Fundamentals: Discretionary assessment of a company's financial situation.

DISCLAIMER

IMPORTANT INFORMATION - FOR FINANCIAL PROFESSIONALS AND INSTITUTIONAL INVESTORS ONLY

This marketing document has been issued by GAMA Asset Management SA (hereinafter "GAMA"). This Document is for information purpose only and does not constitute an offer or a recommendation to buy or sell any securities. It is not intended for distribution, use or publication in any jurisdiction where such distribution use or publication would be prohibited. This document is the property of GAMA and is addressed to its recipient exclusively for their personal use. It may not be reproduced (in whole or in part), transmitted, modified, or used for any other purpose without the prior written permission of GAMA. The data are indicative and might differ significantly depending on market conditions. We do not guarantee the timeliness, accuracy, or completeness of the information on this document. Information may become outdated and opinions may change, including as a result of new data or changes in the markets. The document may include information sourced from third parties. We are not responsible for the accuracy or completeness of, and do not recommend or endorse, such information. Except to the extent any law prohibits such exclusion, we are not liable for any loss (including direct, indirect and consequential loss, loss of profits, loss or corruption of data or economic loss of any kind) that may result from the use or access of, or the inability to use or access, the materials on this document. The value of investments and any income from them may go down as well as up. Investors may not get back all of their original investment. Past performance is no guarantee of future results. Each investor must make her / his own independent decisions regarding any securities or financial instruments mentioned herein. Investments are subject to various risks, such as credit risk, interest rate risks, currency risks, or liquidity risks, as well as regulatory, legal and tax risk. The investments mentioned in this document may carry risks that are difficult to assess and quantify and those risks may significantly change over time. Some bond segments with specific features might be considered as complex instruments and may involve a high degree of risks and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. They might therefore be aimed only for those investors that are able to understand the risks involved and are ready to bear their associated risks. Before entering any transaction, investors should consult their investment advisor and, where necessary, get independent professional advice in respect to the risks and suitability of the investment. The liquidity of an instrument may not have a well-established secondary market or in extreme market conditions may be difficult to value, to buy or sell. Tax treatment depends on the individual circumstances of each person and may be subject to change in the future. GAMA does not provide tax advice. Therefore, each investor must verify with his/her external tax advisors whether the securities are suitable for her/his circumstances. GAMA may or may not hold positions in securities as referred to this document in the funds or portfolios managed on behalf of its clients.
