

Monthly Factsheet (USD F ACC) - 30 September 2025

FUND OVERVIEW

GAMA Funds - Global Bond Opportunities is an unconstrained, multisector, actively managed fund intended as a core fixed income holding for investors with a time horizon of three years or more. The fund has no benchmark, as its investment strategy is not constrained by any index and aims to flexibly allocate across fixed income sectors based on evolving market opportunities. Instead of a traditional benchmark, the portfolio is constructed using a proprietary Strategic Asset Allocation (SAA) as a reference framework, developed by the managers and reviewed on an annual basis. The fund's objective is to generate income and capital appreciation with a realized volatility of less than 5% by investing principally in global debt securities.

The fund's performance has been mainly driven by its exposure to global interest rates, credit and currencies. The fund can invest in any country, currency, or credit rating. Its flexibility allows it to make full use of the diversified opportunities offered by the global bond universe. The fund managers apply a rigorous investment process that combines in-depth fundamental analysis with reliable quantitative models. Relevant ESG considerations are integrated into the investment process.

PERFORMANCE DISCLOSURES

The source for performance data is Bloomberg. Past performance may not be a reliable guide to future performance. There is no guarantee that the same returns will be obtained in the future. The value and income of any investment may fluctuate with market conditions and may lose some or all its value. Fluctuations in exchange rates between your base currency and the fund's currency, might impact the value of the investment. Performance is presented net of ongoing charges but does not take into account the taxes, commissions and costs borne by the investor when buying, holding and selling shares of the Sub-Fund. Prior to the launch of the F share class in June 2020, performance of the P class is shown.

Glossary

Sharpe Ratio: A metric that evaluates the return of an investment relative to its risk, calculated by dividing excess return over the risk-free rate by the portfolio's volatility.

Volatility: A measure of the variation in portfolio returns over time, expressed as standard deviation; indicates the level of investment risk.

ESG Considerations: Environmental, Social, and Governance criteria used to assess the sustainability and ethical impact of investments.

Average Credit Spread: The average yield difference between corporate bonds and comparable maturity government bonds, reflecting perceived credit risk.

SICAV: An open-ended investment fund structure, allowing investors to buy or redeem shares based on the fund's net asset value.

SFDR Article 8: A category under the EU Sustainable Finance Disclosure Regulation for financial products that promote environmental or social characteristics, but do not have sustainability as their core objective.

Risk Considerations

Risk & reward: The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. There is also a risk that you could lose some or all of your invested capital.

The objective of the Sub-Fund is to provide the investors with long-term capital appreciation by mainly investing in worldwide debt securities (including convertible bonds of any type) issued by corporate or sovereign issuers. The risk/reward profile of the Sub-Fund corresponds to the low risk category of on the SRI scale.

Risks that could affect Sub-Fund performance and are not necessarily fully reflected in the risk and reward rating include:

Interest rate risk: The value of investments in bonds and other debt securities will change according to fluctuations in interest rates.

Currency risk: The fund may be affected by changes in currency exchange rates, which can have an adverse effect on the value of the fund.

Credit risk: Most borrowers may potentially face adverse financial, economic, or political conditions that could induce or force them to default on their debt obligations. The value of investment in credit securities varies according to investors' assessment of the likelihood of such an outcome as well as in line with the general risk appetite in financial markets.

Emerging risk: Investing in so-called "emerging" countries bears greater risk due to social, economic, regulatory, and political instability, making emerging market securities more volatile and less liquid than their developed market peers.

Liquidity risk: The Sub-Fund may invest part of its assets in less liquid securities. Those are securities that cannot easily be sold or exchanged for cash without a substantial loss in value in certain market conditions. Those securities also cannot be sold quickly because of a lack of ready and willing investors or speculators to purchase the asset.

Derivatives risk: The Sub-Fund's use of financial derivatives instruments may result in material fluctuations in its value. Certain types of derivatives transactions may impair the Sub-Fund's liquidity, cause it to liquidate positions at unfavourable times or otherwise cause the Sub-Fund not to achieve its intended objective. Leverage occurs when the economic exposure created by the use of derivatives is greater than the amount invested, resulting in the Sub-Fund being exposed to a greater loss than the initial investment.

Counterparty risk: The Sub-Fund can conclude various transactions with contractual partners. If a contractual partner becomes insolvent, it can no longer or can only partly settle unpaid debts owed to the Sub-Fund.

Operational risk: The Sub-Fund may fall victim to fraud or criminal acts. It may suffer losses as a result of misunderstandings or mistakes by employees of the Management Company or by third parties or may be damaged by external events, such as natural disasters.
