	1 month	YTD	1 Year	3 Years	5 Years
NORRON Nordic Long/Short Equity RC SEK	-2,87	-3,21	7,26	-0,16	-9,63

## Investment manager report

In March, Nordic Long/Short Equity returned -2.87 percent, while the VINX Nordic and SBX Index declined by -2.63 percent and -8.11 percent, respectively. The main contributors during the month were Icelandic Salmon, Nibe, and Sdiptech in the long book, as well as Sandvik, W rtsil , and Invisio in the short book. Dometic, Thule, and Essity were the weakest performers within the long book.

The month was characterized by a marked increase in geopolitical uncertainty, as the escalation in the Middle East triggered an initial risk-off sentiment. Cyclical and economically sensitive sectors underperformed, while defense and energy-related equities delivered strong performance. Historically, market dynamics tend to stabilize following the initial shock, but the outlook remains highly dependent on the duration of the conflict. This underscores the importance of flexible and active portfolio management.

Against this backdrop, we actively managed net exposure throughout the period. As parts of the cyclical long book have gradually been shifted from equities into derivatives (primarily call options) over recent months, our ability to actively manage the portfolio's gamma exposure has increased. This has enabled a more tactical approach to trading market movements, where we have continuously increased exposure during periods of weakness while adjusting via index futures to maintain a stable overall risk level. At month-end, the fund's net exposure stood at 65 percent, corresponding to a beta-adjusted net exposure of 40 percent.

In addition, we took advantage of the broad market decline to selectively increase exposure to high-quality cyclical companies that had declined disproportionately over a short period of time, including Atlas Copco, Boliden, Epiroc, and Hexagon. Our assessment is that the underlying fundamentals remain largely intact, while valuations have adjusted materially lower.

**EU Taxonomy explanation**

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

**Sustainability data explanation**

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

**About Norron**

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages six funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the founders, staff and the Norwegian listed industrial investment company Aker ASA. The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically
