The place of performance and jurisdiction for the Shares of the Fund distributed in Switzerland is at the registered office of the Representative. Publications to Swiss investors in respect of the Shares of the Fund are effected on the electronic platform www.fundinfo.com.

Return in %

	1 month	Year to date	1 year
NORRON Nordic Sustainable Equity RC SEK	3,43	3,95	6,42

Investment manager report

During the month, Nordic Sustainable Equity returned 3.43 percent, compared with gains of 2.78 percent and 3.03 percent for the VINX Nordic Index and SBX Index, respectively. Risk appetite across financial markets improved during May. Although geopolitical uncertainty remains elevated, markets increasingly began to price in a scenario where the most adverse outcomes related to energy supply and global trade can be avoided.

At the company level, performance was broad-based, but several of the fund's larger holdings made particularly strong contributions to returns. Serial acquirers with attractive valuations outperformed the broader market. Vestum and Sdiptech, two companies we have held for a considerable period, were among the month's strongest contributors. In both cases, we continue to see improvements in the underlying businesses through stronger organic growth, improving margins, and enhanced operational stability. These are factors that, in our view, have not been fully reflected in share prices for some time but are now increasingly being recognized by the market.

SSAB also performed strongly and contributed positively to fund performance. Over several years, the company has implemented significant operational improvements while substantially strengthening its balance sheet. In addition, steel prices have been supported by tariff-related measures in both the EU and the US. Among the fund's negative contributors was Alfa Laval, which underperformed during the month following a strong share price performance earlier in the year. Exposure to the forestry sector also weighed on returns. However, we believe that several forestry companies are trading at attractive valuations and stand to benefit from a broader economic recovery as investment activity and risk appetite continue to improve. Other weaker-performing holdings during the month included SkiStar and Lindab.

From a sustainability theme perspective, Sustainable Cities and Infrastructure was the strongest-performing theme during the month and represented 37 percent of the fund. Climate and Environment, by contrast, made a marginally negative contribution and accounted for just over two percent of the fund's total weight.

NORDIC SUSTAINABLE EQUITY

ISIN for Swiss Investors: LU2436693597

MONTHLY REPORT

MAY 2026

About Norron

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages five funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the Norwegian listed industrial investment company Aker ASA.

The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically very competitive return.

To read more about the company, we refer to the website www.norron.com.

EU Taxonomy explanation

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

Sustainability data explanation

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

Investment strategy

Nordic Sustainable Equity is an actively managed Nordic sustainability fund, classified as Article 9 under SFDR. Investments aim to combine economic profitability with social and environmental responsibility. The fund invests in large, medium, and small companies. The fund's philosophy is to make sustainable investments. The companies we invest in should therefore contribute to one of the fund's four sustainability objectives: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, or Sustainable cities & infrastructure.

A fund's historical return is no guarantee of future returns. The value of the fund units can both increase and decrease as a result of market developments and it is not certain that you will get back all the invested capital.
